

Engineering & Construction

Description

As the foremost global provider of a full-spectrum of end-to-end environmental, industrial and emergency response services, NRC works closely with engineering, consulting and construction companies to provide tailored solutions for Fortune 500 and 100 clients around the world. Ranked number 51 by the Engineering News Record's list of Top 200 Environmental firms, NRC routinely performs multi-disciplinary, complex projects in a variety of geographies, with the highest commitment to safety and compliance.

Some of NRC's longest business relationships are with environmental engineering & consulting (E&C) firms. These firms are tasked with the design and management of remedial actions and portfolios on behalf of site owners. We work collaboratively with our E&C clients to develop custom solutions to complex remediation projects. And, we often provide constructability reviews and value engineering in a design-build fashion.

As a world renowned leader in environmental services, general contractors trust NRC to perform a variety of tasks. This includes dewatering, decontamination and abatement of hazardous materials, and selective demolition services, within large scale construction projects. NRC provides safe, cost-effective and compliant solutions that help keep the rest of the project on schedule and within budget.
