

Power Generation

Description

NRC has extensive experience servicing the energy sector. From nuclear and fossil fuel generating companies to onshore and offshore renewable energy providers, NRC is providing the most comprehensive environmental, industrial, and emergency response services to the power industry.

Our experience extends from undertaking ad-hoc cleaning activities to supporting full shutdown / outages where extensive maintenance programmes and other critical path activities are completed.

Whether it be providing best waste management practices, containment of soil or ground water contamination, or on-site remediation, NRC provides the necessary support services to effectively maintain the integrity of the energy sector.

Our broad scope of services and capabilities enable us to provide multi-disciplined personnel augmented by latest technology to deliver tailored solutions for a range of work activities safely and efficiently.

Focused on the use of technology NRC can provide innovative and cost effective solutions without compromising safety or indeed service quality.
