

Railroad

Description

At NRC, we understand the importance and value of providing our rail clients with all of the services they need and the ability to provide those services across a broad geography. Rail companies around the globe rely on our experience, expertise and response capabilities to handle any emergency or planned event, whenever and wherever it takes place.

NRC offers a comprehensive suite of expert and cost-effective response, recovery and remediation services to some of the world's largest rail companies including many of the United States Class 1, short line and regional railroads, with an uncompromising commitment to quality and safety.

Our highly specialized services include planning, specialty training, staging of equipment packages, high hazard response, level A, B and C emergency response, firefighting, operations and maintenance, waste management, railcar transloading, site remediation, and expert consultancy.

The combination of specialty equipment and highly trained, experienced personnel make us uniquely qualified to help our clients prepare, respond and remediate all their environmental concerns, including the ability to deploy specialized high hazard response teams to contain and mitigate any incident.
