

Highway Transportation

Description

NRC is a global leader in environmental, industrial, and emergency response solutions. As such, we are committed to providing the highway transportation industry with cost-effective response services. This includes preparedness, response, recovery and remediation services with an uncompromising commitment to quality and safety.

With a highly trained staff and a vast array of specialized equipment, NRC offers turnkey solutions to manage our clients's environmental needs. NRC can respond anywhere in the world. From a small fuel spill to a large release of bulk hazardous materials, NRC's professional team of responders can mitigate the impact. Then, we seamlessly transition from the emergency response into the remediation phase.

Our vast inventory of specialized equipment includes: hazardous materials response trucks and trailers, vacuum trucks, specialized high hazard transfer equipment, hot & cold tapping equipment, flaring equipment, industrial firefighting equipment, environmental monitoring equipment, temporary storage and containment systems. All equipment is supported by experienced and well-trained staff.

NRC's goal is to provide the highest available state of readiness for our clients in the highway transportation industry.
